PROFESSIONAL PROFILE

Senior Software Engineer with strong expertise in TypeScript, Vue/Nuxt.js, React/Next.js, and full-stack development. Proven ability to quickly adapt to new domains and tech stacks — including frontend, backend, online gaming, e-commerce, content platforms, and AI integration. Experienced in building scalable, user-focused applications from legacy modernization to greenfield development. Passionate about delivering high-impact solutions and open to any development-focused software engineering role.

SKILLS

Language: Typescript, Javascript, Python, PHP, Java, HTML/CSS, SQL, Bash

Frameworks & Libraries: Vue (Nuxt.js), React (Next.js), Tailwind, Laravel, Redis, RabbitMQ, Kafka

Database: MSSQL, MySQL, MariaDB, MongoDB, PostgreSQL, Elasticsearch

Others: RESTapi, Protobuf, GraphQL, Linux, Git, Node.js; CI/CD, Docker, Nginx, Kubernetes; Gen AI, RAG, Agentic AI, LLM finetune; Cloudflare, AWS, Alibaba Cloud, Dify, Ollama, Drupal, Ibexa, Stripe, Magento, Google Analytics

WORKING EXPERIENCE

IT Officer, HKU Li Ka Shing Faculty of Medicine, HK

Jan 2025 - Present

- Modernized legacy development practices in a traditional university environment by introducing **Docker** containerization, standardizing Git workflows, and replacing ad-hoc zip-based deployments with proper **CI/CD** processes.
- Independently designed, developed, and maintained multiple internal faculty systems (e.g. master admission, student records, room & clinic booking, attendance) using **Next.js** and **Shadcn/UI**, delivering secure and privacy-focused solutions.
- Integrated **local LLMs** (hosted on H100 servers) into various workflows for document analysis, meeting transcription, metadata extraction, OCR, chatbots, and news processing while ensuring data privacy.
- Leading the migration of high-value external subscription systems (HK\$2B/year) to in-house Next.js solutions; also developed and maintained public-facing websites using **Drupal**.

Senior Engineer I, South China Morning Post, HK

Jun 2022 – Dec 2024

- Led the full revamp of Cosmopolitan website with a completely new frontend design and backend architecture using **Nuxt.js 3**, completing the first major development phase in 4 months and launching after 6 months total.
- Migrated the remaining three magazine websites (ELLE, Harper's BAZAAR, Esquire) from Nuxt.js 2 + CSS to **Nuxt.js 3 + UnoCSS** using reusable components and layout systems, delivering each within 1 month while maintaining 99.9% uptime and supporting ~40,000 daily users per site.
- Contributed to the **Nuxt.js 3** revamp of the Cosmart membership platform and the migration of Cosmart Shop e-commerce from Shopify to Magento; implemented **Google Analytics 4**, enhanced **SEO**, and optimized frontend performance (Core Web Vitals below 100).

Senior Programmer, Digitcube.com Limited, HK

Dec 2019 – Jan 2022

- Developed and maintained frontend for online arcade gambling games using **Egret Engine**, **Protobuf**, and **WebSocket**, collaborating closely with backend, design, QA, and game planner teams to deliver new features, bug fixes, currency support, animations, and seasonal events.
- Designed and launched multiple new game archetypes (including Bustabit-style crash mechanics and multistage betting), introducing real-time elements and dynamic odds that generated RMB 7M revenue in the first month, attracted 30% of the platform's player base, and contributed to a 20% increase in total active players.
- Built a comprehensive data collection system to track user behaviour and send structured events to the backend, enabling deeper game performance and user insights across departments.

Web Developer, *Collectionstock*, HK

Aug 2018 – Sep 2019

- Developed and maintained the core B2B/B2C e-commerce platform for design pattern licensing using **Vuex, Laravel, and MySQL**, hosted on **AWS EC2 with Cloudflare** asset delivery, delivering both frontend and backend features in a small startup team.
- Increased monthly subscriptions by 150% (80 → 200) within six months through subscription model improvements and brand collaborations (e.g. Pantone).
- Independently built a new e-commerce site (gettaBAG) from scratch in one month using the same tech stack and handled deployment, maintenance, and product ideation with the founder.

PROJECT

DApp – NFT Website, *Badfacebot*

Dec 2022

- A website for minting the NFT Collection and providing NFT holder exclusive functionality.
- The project was **ranked top 1000 on the OpenSea Ethereum chain** at launch, **profited over 300ETH** in total.

EDUCATION

Bachelor of Computer Science, *University of Sheffield*, UK

September 2015 – June 2018

- Class One Honours

LANGUAGE

Cantonese: Native, **Mandarin**: Fluent, **English**: Fluent
